## AIRFLOW SWITCH

AIRFLOW SWITCH: Protects equipment against damage caused by loss of cooling airflow by activating an alarm or turning off power. The switch can be mounted on any suitable surface which allows the stainless steel air vane to be placed in the critical airstream. This switch is a single-pole double-throw type, with normally open and normally closed contacts.
The UL rating for the rotary snap action switch is 5 amps at 250 volts AC. A three foot [ 0.9 m ], three-wire power cord is provided, allowing connection to normally open or normally closed circuits.
The choice of air vanes is determined by location and orientation in the airstream, and the normal operating air velocity at the point of installation. Refer to the chart below or consult KOOLTRONIC Engineering for assistance.
